1. Project Overview

For clinic management.

What the website does

The website presents the clinic, its doctors and its treatments. Patients can use it to:

- **book a consultation online.** They pick a treatment, a doctor, a date and a time slot.
- **buy skincare products** and pay by card, Apple Pay or Google Pay through Stripe, or place the order by WhatsApp.
- **see real results and videos** from the clinic's Instagram (@pearl_medicals). These play on the website itself.
- **read real Google reviews** and find the clinic on Google Maps.

The **admin panel** lets staff manage bookings, orders, products and treatments without a developer. The clinic owner is the **super admin** and invites the rest of the team by email from the admin panel.

Pages

Page	Address	What it shows
Home	`/`	Hero, featured treatments, doctors, results and videos, facilities, reviews, FAQ
Treatments	`/treatments`	All treatments, managed from the admin panel
Treatment menu	`/treatment-menu`	Full price list
HydraFacial	`/treatments/hydrafacial`	Detailed treatment page with a before/after slider
Book a consultation	`/book-consultation`	Step-by-step booking with a calendar and time slots
Our doctors	`/doctors` and `/doctors/<name>`	The four doctors, each with a profile page
Results and gallery	`/results`	Before/afters and videos from Instagram
Shop	`/shop` and `/shop/<product>`	Skincare products
Cart and checkout	`/cart`	Delivery details and payment
Special offers	`/offers`	Current offers

Page	Address	What it shows
Insights	`/insights`	Articles and advice
About	`/about`	Clinic story and values
Contact	`/contact`	Address, phone, WhatsApp, map, contact form
Admin panel	`/admin`	Staff only, login required

What happens automatically

When…	The website…
A patient books	Saves the booking, emails the patient a confirmation, emails the clinic, and sends a WhatsApp alert to the clinic
A customer pays for an order	Marks it paid, reduces stock, emails the customer, and alerts the clinic by email and WhatsApp
A payment fails, expires or is refunded in Stripe	Updates the order's status in the admin panel
The clinic posts on Instagram	Shows the new post or video on the site within about 15 minutes
A new Google review appears	Shows the latest reviews (refreshed every 6 hours)
The super admin invites a staff member	Creates their login and emails them a link to set their password

Some of these need accounts and keys to be set up first. See Accounts and access and the checklist in file 8.

How it is built

The website has three parts:

1. **Website (frontend):** a React application hosted on **Netlify**.
2. **Database and staff logins: Supabase**, which stores bookings, orders, products, treatments and the Instagram videos.
3. **Server functions:** eight small programs on **Supabase**. They handle anything that needs a secret key: payments, emails, WhatsApp, Instagram, Google reviews and staff invitations.

There is no separate server to rent or maintain.

Known limitations at handover

- **HydraFacial before/after photos** are still placeholder images. They need real photos of patients who have given consent.
- **Insights and Special Offers** contain sample text. They need the clinic's real articles and offers.

- **Product and treatment images** are added by pasting an image link in the admin panel. Uploading image files directly is not built yet; see the optional services in file 7.
- **The clinic's email address** (`info@pearlaestheticgp.com`) has not been confirmed. Please confirm the real inbox.
