PROJECT HANDOVER PACK

Pearl Aesthetics & GP Medical Clinic

Website, Online Booking, Skincare Shop & Admin Panel

Developed and handed over by Kelpsi Software LLC

Prepared 28 October 2026 · Handover date: _____

Contents

1. Project Handover — Pearl Aesthetics & GP Medical Clinic Website
2. 1. Project Overview
3. 2. Accounts and Access
4. 3. Admin Panel Guide
5. 4. Updating Content
6. 5. Technical Setup and Deployment
7. 6. Maintenance and Troubleshooting
8. 7. Ongoing Services from Kelpsi Software LLC
9. 8. Handover Checklist and Sign-off

Project Handover — Pearl Aesthetics & GP Medical Clinic Website

Client	Pearl Aesthetics & GP Medical Clinic L.L.C, Dubai
Developed by	Kelpsi Software LLC
Project	Clinic website, online booking, skincare shop and staff admin panel
Document prepared	28 October 2026
Handover date	[To be confirmed]
Code repository	`github.com/abrahamoadegbola/PEARL-AESTHETICS-GP`
Live website address	[To be confirmed]

What is being handed over

1. The finished website, live on Netlify, with 17 public pages.
2. The staff admin panel at `/admin`, for bookings, orders, products and treatments, with a super admin who invites staff by email.
3. The database and server functions, hosted on Supabase.
4. Integrations: - card payments through Stripe - booking and order emails - WhatsApp alerts - Instagram feed and videos - Google reviews
5. The full source code and this documentation.

The handover pack

Read the files in this order. Each file says who it is written for.

#	File	Who it is for
1	Project overview	Clinic management
2	Accounts and access	Clinic management
3	Admin panel guide	Reception and clinic staff
4	Updating content	Clinic marketing team
5	Technical setup and deployment	Developers
6	Maintenance and troubleshooting	Developers, with a short section for staff

#	File	Who it is for
7	Ongoing services from Kelpsi	Clinic management
8	Handover checklist and sign-off	Both parties

The main project README in the code repository has the full technical reference. These files summarise it and add what the clinic needs to run the site day to day.

Contacts

Role	Name	Email	Phone
Kelpsi Software LLC, project lead	[Name]	[Email]	[Phone]
Kelpsi Software LLC, support	[Name]	[Email]	[Phone]
Clinic, main contact	[Name]	[Email]	[Phone]
Clinic, technical or admin contact	[Name]	[Email]	[Phone]

1. Project Overview

For clinic management.

What the website does

The website presents the clinic, its doctors and its treatments. Patients can use it to:

- **book a consultation online.** They pick a treatment, a doctor, a date and a time slot.
- **buy skincare products** and pay by card, Apple Pay or Google Pay through Stripe, or place the order by WhatsApp.
- **see real results and videos** from the clinic's Instagram (@pearl_medicals). These play on the website itself.
- **read real Google reviews** and find the clinic on Google Maps.

The **admin panel** lets staff manage bookings, orders, products and treatments without a developer. The clinic owner is the **super admin** and invites the rest of the team by email from the admin panel.

Pages

Page	Address	What it shows
Home	`/`	Hero, featured treatments, doctors, results and videos, facilities, reviews, FAQ
Treatments	`/treatments`	All treatments, managed from the admin panel
Treatment menu	`/treatment-menu`	Full price list
HydraFacial	`/treatments/hydrafacial`	Detailed treatment page with a before/after slider
Book a consultation	`/book-consultation`	Step-by-step booking with a calendar and time slots
Our doctors	`/doctors` and `/doctors/<name>`	The four doctors, each with a profile page
Results and gallery	`/results`	Before/afters and videos from Instagram
Shop	`/shop` and `/shop/<product>`	Skincare products
Cart and checkout	`/cart`	Delivery details and payment
Special offers	`/offers`	Current offers

Page	Address	What it shows
Insights	`/insights`	Articles and advice
About	`/about`	Clinic story and values
Contact	`/contact`	Address, phone, WhatsApp, map, contact form
Admin panel	`/admin`	Staff only, login required

What happens automatically

When…	The website…
A patient books	Saves the booking, emails the patient a confirmation, emails the clinic, and sends a WhatsApp alert to the clinic
A customer pays for an order	Marks it paid, reduces stock, emails the customer, and alerts the clinic by email and WhatsApp
A payment fails, expires or is refunded in Stripe	Updates the order's status in the admin panel
The clinic posts on Instagram	Shows the new post or video on the site within about 15 minutes
A new Google review appears	Shows the latest reviews (refreshed every 6 hours)
The super admin invites a staff member	Creates their login and emails them a link to set their password

Some of these need accounts and keys to be set up first. See Accounts and access and the checklist in file 8.

How it is built

The website has three parts:

1. **Website (frontend):** a React application hosted on **Netlify**.
2. **Database and staff logins: Supabase**, which stores bookings, orders, products, treatments and the Instagram videos.
3. **Server functions:** eight small programs on **Supabase**. They handle anything that needs a secret key: payments, emails, WhatsApp, Instagram, Google reviews and staff invitations.

There is no separate server to rent or maintain.

Known limitations at handover

- **HydraFacial before/after photos** are still placeholder images. They need real photos of patients who have given consent.
- **Insights and Special Offers** contain sample text. They need the clinic's real articles and offers.

- **Product and treatment images** are added by pasting an image link in the admin panel. Uploading image files directly is not built yet; see the optional services in file 7.
- **The clinic's email address** (`info@pearlaestheticgp.com`) has not been confirmed. Please confirm the real inbox.

2. Accounts and Access

For clinic management.

The website depends on the services listed below. **Each account should be owned by the clinic**, registered to a clinic email address with the clinic's payment card. Kelpsi Software LLC should then be added as a team member where ongoing support needs access. That way the clinic keeps full control, even if the support arrangement ever ends.

> **Passwords and keys are never written in this document or in the code.** Hand them over through a password manager (for example Bitwarden or 1Password) or in person. Never send them by plain email or WhatsApp.

Service accounts

Service	What it is used for	Cost	Account owner	Kelpsi access
Netlify	Hosts the website	Free plan is enough to start	[ ]	[ ]
Supabase	Database, staff logins, server functions, video storage	Free plan to start; Pro is about US$25/month if storage or traffic grows	[ ]	[ ]
GitHub	Stores the source code	Free	[ ]	[ ]
Stripe	Card, Apple Pay and Google Pay payments	Per-transaction fees only	[ ]	[ ]
Gmail account (sending)	Sends booking and order emails	Free	[ ]	[ ]
Meta for Developers: WhatsApp Cloud API	WhatsApp alerts to the clinic	Small per-message fee from Meta	[ ]	[ ]
Meta for Developers: Instagram API	Pulls posts and videos from @pearl_medicals	Free	[ ]	[ ]
Google Cloud: Places API	Live Google reviews	Usually within Google's free monthly allowance	[ ]	[ ]
Domain name registrar	The website address	Yearly renewal	[ ]	[ ]

Fill in the "Account owner" and "Kelpsi access" columns together at handover.

Keys and settings each service provides

The developer setting up or maintaining the site enters these. Full instructions are in Technical setup.

Service	Key or setting	Where it is entered
Supabase	Project URL, public (anon) key	Netlify environment variables
Stripe	Publishable key	Netlify environment variables
Stripe	Secret key, webhook signing secret	Supabase secrets
Gmail	Address and 16-character App Password	Supabase secrets
WhatsApp	Access token, phone number ID, template names	Supabase secrets
Instagram	Long-lived access token	Supabase secrets
Google	Places API key	Supabase secrets

Staff logins (admin panel)

There are two kinds of admin account:

Role	Who	Can do
Super admin	The clinic owner	Everything, plus invite and remove staff on the **Staff** page
Staff	Invited team members	Bookings, orders, products and treatments

- **Only the super admin's account is created in Supabase**, once: **Supabase** → **Authentication** → **Users** → **Add user**. The first person to sign in at `<website>/admin` becomes the super admin, so the owner should sign in straight after the account is made.
- **Everyone else is invited by email** from **Admin** → **Staff**. They get a link to choose their own password. Nobody else needs a Supabase login.
- There is no public sign-up. An account that isn't on the staff list sees "No admin access" and can't see any patient data.
- When someone leaves the clinic, the super admin clicks **Remove** next to their name on the Staff page the same day. Their access ends immediately.

Person	Role	Login email	Invited on
[ ]	Super admin	[ ]	[ ]
[ ]	Staff	[ ]	[ ]

Patient data

The database stores patients' names, phone numbers, emails, booking details and delivery addresses.

- Only logged-in staff can read it. The public website can add bookings and orders but cannot read them back.
- The clinic is responsible for how this data is used under UAE data-protection rules and DHA requirements.
- Supabase's paid plans include daily backups. See file 6.

3. Admin Panel Guide

For reception and clinic staff. No technical knowledge needed.

Your first sign-in (invited staff)

1. The super admin invites you, and you receive an email: **"Your invitation to the clinic admin panel"**.
2. Click **Accept invitation**. The link works once and expires after 24 hours.
3. Enter your name, choose a password (at least 8 characters), and click **Save password & continue**.
4. You're now in the admin panel. From then on, sign in with your email and that password.

If the link has expired, ask the super admin to click **Resend invite**.

Logging in

1. Go to `<website>/admin`, or click **Staff Login** at the bottom of any page.
2. Enter your email and password.
3. To log out, click **Sign Out** in the side menu. Always sign out on shared computers.

Forgot your password? Ask the super admin to click **Reset password** next to your name on the Staff page. You'll get an email with a link to choose a new one.

Dashboard

The first screen shows:

- **Pending bookings:** requests nobody has dealt with yet.
- **Unpaid orders:** shop orders not yet paid.
- **Confirmed revenue:** total from paid orders.
- **Low stock items:** products running out.
- **Recent activity.**

New bookings and orders appear **instantly**. There's no need to refresh the page.

Bookings

Every consultation request from the website appears here.

Status	Meaning	What to do
Pending	New request	Call or WhatsApp the patient to confirm the time
Confirmed	Time agreed with the patient	Make sure it is in the clinic's appointment system

Status	Meaning	What to do
Completed	The patient attended	Nothing
Cancelled	Will not go ahead	Nothing

- The **WhatsApp** button opens a chat with the patient, with a message already filled in.
- Change the status as the booking moves along. This keeps the dashboard accurate.
- **Delete** only removes test or duplicate entries. Deleting cannot be undone.

> A booking from the website is a **request**. The patient was told the clinic will confirm. Contact them as soon as possible, ideally within the same working day.

Orders and payments

Each order has **two separate statuses**:

Payment status is set automatically by Stripe. Don't change it by hand.

Status	Meaning
Pending	Not paid yet. This includes orders placed by WhatsApp, which are paid on delivery or by arrangement.
Paid	Card payment received
Failed	The payment did not go through
Expired	The customer left checkout without paying
Refunded	Money returned through Stripe

Fulfilment status is updated by staff: **Pending** → **Processing** → **Shipped** → **Completed**, or **Cancelled**.

- **Refunds** are made in the **Stripe dashboard**, not in the admin panel. The order switches to *Refunded* automatically.
- For WhatsApp orders, contact the customer to arrange payment and delivery.

Inventory (shop products)

- **Add a product:** click **Add Product**, then fill in the name, category, skin concern, size, price (AED), stock and description, and paste an **image link**.
- **Edit:** click the pencil icon.
- **Hide a product** without deleting it: switch **Active** off.
- **Stock** goes down automatically when an order is paid. Update it when new stock arrives.
- **Badge** shows a small label on the product, for example "Bestseller" or "New". It is optional.

Treatments

What you change here updates the Home page, the Treatments page and the Treatment Menu at once.

- Each treatment has a name, category, description, price text, duration, icon, image link, and **Featured** and **Active** switches.
- **Featured** shows the treatment prominently on the Home page.
- Switch **Active** off to hide a treatment without losing it.

Staff (super admin only)

Only the super admin sees **Staff** in the menu.

- **Invite someone:** enter their name and email, then click **Send invite**. They receive an email with a link to set their password, and appear in the list as **Invited**. Once they've set a password they show as **Active**.
- **Resend invite / Reset password:** sends the person a fresh link, for an expired invitation or a forgotten password.
- **Remove:** ends that person's access immediately. Do this the day someone leaves the clinic.
- If the email can't be sent, the page shows the link instead. Copy it and send it to the person yourself, for example by WhatsApp.
- Every staff member has full access to bookings, orders, products and treatments, so only invite people who need it.

Good practice

- Check the dashboard at the start and end of each day.
- Never share logins. Each staff member should have their own account, invited from the Staff page.
- If something looks wrong, such as a missing booking or an order with the wrong status, note the patient's name and the time, then contact support. See file 7.

4. Updating Content

For the clinic's marketing team.

Some content updates itself. Some you change in the admin panel. The rest is in the code and needs a developer, which is covered by the support plan in file 7.

Updates automatically: Instagram

Results, videos and the Facilities section come from **@pearl_medicals**. Post on Instagram as normal, and the post appears on the website within about 15 minutes. Videos play on the website in the clinic's own player, with no Instagram branding.

Where a post appears depends on words in its caption:

Put this in the caption	The post appears in
`before & after`, `#results` or `#beforeandafter`	Patient Results (Home page and gallery)
`#facilities`, `#ourclinic` or `#clinictour`	Facilities section on the Home page
`#event`, `#healthtips` or `#team`	The matching gallery filter

- All videos (reels) appear under the **Videos** filter.
- The **first line of the caption** becomes the post's title on the website. Keep it short and clear.
- Deleting a post on Instagram removes it from the website too.
- The Facilities section keeps the saved clinic photos until at least **three** posts carry a facilities tag.

> Only post before/after photos of patients who have given written consent to marketing use.

Updates automatically: Google reviews

The Home page shows the clinic's latest Google reviews and star rating. Encourage patients to leave reviews; the site links to Google's review page.

Changed in the admin panel

Products, prices, stock and treatments. See the Admin panel guide.

Needs a developer

Content	Where it lives in the code
Phone numbers, address, opening hours, email, WhatsApp number	`src/data/business.js`
Doctors' names, photos, biographies, languages, qualifications	`src/data/doctors.js`
Page text (Home, About, FAQ, etc.)	`src/pages/`
Insights articles	`src/pages/InsightsAdvice.jsx`
Special offers	`src/pages/SpecialOffers.jsx`
Logo and website icon	`public/logo.png` ; the website icons are generated from it
Email wording and design	`supabase/functions/_shared/emailTemplate.ts`

When you ask for a change, send:

- the page address
- the exact current text
- the new text or images

For a new doctor, also send a portrait photo (at least 1000 px tall), their qualifications, the languages they speak, and a short biography.

5. Technical Setup and Deployment

For developers. Full detail is in the main README; this file is the short, ordered version.

Stack

- React 19, React Router 7, Vite 8 and Tailwind CSS 3. JavaScript only.
- Framer Motion for animation.
- Supabase: Postgres, Auth, Realtime, Storage, and Edge Functions (Deno).
- Stripe Checkout, Gmail SMTP (denomailer), WhatsApp Cloud API, Instagram API with Instagram Login, and Google Places API (New).
- Hosting: Netlify for the static frontend. `public/_redirects` sends every route to `index.html`, so `/admin` and the other deep links work.

Repository layout

```
src/
  pages/            one component per page; admin/ holds the staff panel
  components/       shared UI (Header, Footer, PageHero, InstagramCard player, form/)
  hooks/            useInstagramFeed, useGoogleReviews, useDbCollection, ...
  lib/              supabaseClient, db.js (queries), api.js (Edge Function calls), stripe,
whatsapp
  data/             business.js, doctors.js, instagram.js (saved fallback posts)
public/             logo, favicons, saved Instagram images, _redirects
supabase/
  schema.sql        tables, RLS policies, functions, storage bucket. Safe to re-run.
  config.toml       per-function JWT settings
  functions/        8 Edge Functions plus _shared/
```

First-time setup, in order

1. **Install and run locally** `bash npm install cp .env.example .env # fill in the Supabase URL and anon key, and the Stripe publishable key npm run dev`
2. **Database:** in the Supabase SQL Editor, run the whole of `supabase/schema.sql`. It can be re-run safely after updates.
3. **Authentication settings** (Supabase dashboard): - **Sign In / Providers** → **Email:** turn off **Allow new users to sign up**. Staff join by invitation only. - **URL Configuration:** set **Site URL** to the live domain, and add `https://<domain>/admin/accept-invite` to **Redirect URLs**. - **Users** → **Add user:** create the clinic owner's account. This is the only account made by hand. The owner then signs in once at `/admin`; the first sign-in becomes the **super admin**, who invites all other staff from **Admin** → **Staff**.
4. **Link the CLI** `bash npm install -g supabase supabase login supabase link --project-ref <project-ref>`

5. **Secrets:** copy `supabase/functions/.env.example` to `supabase/functions/.env` (this file is git-ignored), fill it in, then run: `bash supabase secrets set --env-file supabase/functions/.env supabase secrets list # shows the names only, to check`
6. **Deploy the functions** `bash for f in create-checkout-session checkout-session-status send-booking-email \ send-contact-email stripe-webhook instagram-feed google-reviews manage-staff; do supabase functions deploy $f done`
7. **Stripe webhook:** - Endpoint: `https://<project-ref>.supabase.co/functions/v1/stripe-webhook` - Events: `checkout.session.completed`, `checkout.session.async_payment_succeeded`, `checkout.session.async_payment_failed`, `checkout.session.expired`, `charge.refunded` - Put the signing secret in `STRIPE_WEBHOOK_SECRET`.
8. **Netlify:** - Connect the GitHub repository. - Build command: `npm run build`. Publish directory: `dist`. - Add the `VITE_SUPABASE_URL`, `VITE_SUPABASE_ANON_KEY` and `VITE_STRIPE_PUBLISHABLE_KEY` environment variables. - Set `CLIENT_URL` (a Supabase secret) to the live domain.
9. **Optional: hourly Instagram sync.** This is the `pg_cron` job in README §7, so new posts appear even when nobody visits the site.

Environment variables

Netlify (built into the public bundle, so these must be public keys only): `VITE_SUPABASE_URL`, `VITE_SUPABASE_ANON_KEY`, `VITE_STRIPE_PUBLISHABLE_KEY`

Supabase secrets (server-side only):

Group	Variables
Stripe	`STRIPE_SECRET_KEY`, `STRIPE_WEBHOOK_SECRET`, `CLIENT_URL`, `STRIPE_PAYMENT_METHOD_TYPES`, `STRIPE_ALLOW_PROMOTION_CODES`, `STRIPE_INVOICES`
Email	`SMTP_USER`, `SMTP_PASS`, `SMTP_FROM`, `CLINIC_NOTIFY_EMAIL`
WhatsApp	`WHATSAPP_TOKEN`, `WHATSAPP_PHONE_NUMBER_ID`, `CLINIC_WHATSAPP_NUMBER`, `WHATSAPP_BOOKING_TEMPLATE`, `WHATSAPP_ORDER_TEMPLATE`, `WHATSAPP_TEMPLATE_LANG`
Instagram	`INSTAGRAM_ACCESS_TOKEN`
Google	`GOOGLE_PLACES_API_KEY`, `GOOGLE_PLACE_ID`

Any blank value switches that feature off without breaking the site. For example, with no Stripe key the shop falls back to WhatsApp orders.

Edge Functions

Function	Called by	Does
`create-checkout-session`	Cart page	Re-prices the order server-side (items + 5% VAT + delivery) and opens Stripe Checkout

Function	Called by	Does
`checkout-session-status`	Success page	Confirms the payment and marks the order paid (only once)
`stripe-webhook`	Stripe	Handles paid, failed, expired and refunded events. Called without a JWT; checks Stripe's signature instead.
`send-booking-email`	Booking page	Sends the patient and clinic emails and the WhatsApp alert. Only sends once per booking.
`send-contact-email`	Contact page	Sends contact-form enquiries
`instagram-feed`	Gallery, Home	Copies posts and videos into Storage, serves the feed, and refreshes the token weekly
`google-reviews`	Home	Live rating and reviews, cached for 6 hours
`manage-staff`	Admin → Staff	Super admin only. Lists, invites, resends links to and removes staff. Invitation and reset links are sent through the Gmail mailer and open `/admin/accept-invite`. Uses `CLIENT_URL` for the link address.

Security model

- **Row Level Security** is on for every table. Anonymous visitors can only read active products and treatments, insert bookings and orders, and call `decrement_stock()`.
- **Admin access needs a staff-list entry, not just a login.** Every admin policy checks `public.is_staff()` (a row in `public.staff`). Roles are `super_admin` and `staff`. `claim_staff_role()` makes the first signed-in user super admin while none exists, and only `manage-staff` (service role) can add or remove anyone after that.
- Only staff can read or update bookings and orders. Payment status is only ever changed by the functions, using the service-role key.
- `app_settings` and `instagram_posts` have no policies, so only the functions can access them.
- Secret keys exist only as Supabase secrets, never in the repository or in Netlify.

Releasing a change

1. Make the change on a branch and run `npm run build` locally.
2. Merge to `main`. Netlify builds and deploys automatically.
3. If a function changed, run `supabase functions deploy <name>`.
4. If `schema.sql` changed, re-run it in the SQL Editor.

6. Maintenance and Troubleshooting

For clinic staff: quick checks before calling support

Problem	First check
Can't log in to `/admin`	Check the email and password. Ask the super admin to click **Reset password** next to your name on the Staff page.
Invitation link says it has expired	Links work once and last 24 hours. Ask the super admin to click **Resend invite**.
"No admin access" after signing in	Your account isn't on the staff list. Ask the super admin to invite you.
A patient says they got no confirmation email	Ask them to check spam. The booking is still saved; check the admin panel.
No WhatsApp alert for a new booking	The booking is still in the admin panel. Report it to support.
New Instagram post not on the website	Wait 15 minutes and refresh. Check the caption tags (see file 4).
The website is down	Check the domain renewal and the Netlify account, then contact support.

For developers: routine maintenance

How often	Task
Weekly	Look at the function logs for errors: Supabase → Edge Functions → Logs
Monthly	Check Supabase usage (database, storage, function calls) against the plan limits
Monthly	Check Stripe for failed webhook deliveries: Developers → Webhooks
Every 3 months	Update npm dependencies (`npm outdated`), rebuild, test booking and checkout
Every 3 months	Check that the Instagram token is still being refreshed (`app_settings` row `instagram_access_token` , `updated_at` less than about 8 days ago)
Yearly	Renew the domain. Super admin reviews the list on the Staff page.
Before key changes	Test in Stripe **test mode** before switching to live keys

Backups

- **Database:** the Supabase **Pro** plan includes daily backups. On the Free plan, export regularly (Database → Backups, or `pg_dump`).
- **Code:** GitHub. Netlify also keeps every previous deploy, so a bad release can be rolled back in one click (Deploys → choose a deploy → Publish).
- **Videos:** the Storage copies of Instagram videos can always be rebuilt from Instagram by the sync.

Common issues and fixes

Symptom	Likely cause	Fix
`/admin` shows "Not Found" on Netlify	`_redirects` is missing from the deploy	Make sure `public/_redirects` exists and redeploy
"Stripe is not configured yet" at checkout	`STRIPE_SECRET_KEY` not set, or the function not deployed	Set the secret and redeploy `create-checkout-session`
Paid orders stuck on Pending	Webhook not set up, or wrong signing secret	Check Stripe → Webhooks and the `STRIPE_WEBHOOK_SECRET` value
Emails not sent	Wrong Gmail App Password, or Google blocked the sign-in	`supabase functions logs send-booking-email`, then create a new App Password
WhatsApp alerts missing	No approved template, and outside WhatsApp's 24-hour window	Create Utility templates and set `WHATSAPP_*_TEMPLATE`
Instagram feed stopped updating	Token expired (no visits for 60+ days) or the account is no longer Business/Creator	Generate a new token and run `supabase secrets set INSTAGRAM_ACCESS_TOKEN=...`
Reviews show the saved 4 only	`GOOGLE_PLACES_API_KEY` missing or not allowed to use Places API (New)	Check the key's API restrictions in Google Cloud
Invitation link opens the home page instead of the set-password page	`/admin/accept-invite` is missing from Supabase's Redirect URLs, or `CLIENT_URL` is wrong	Add it under Authentication → URL Configuration and check `CLIENT_URL`
Staff page shows a link instead of "Email sent"	Gmail sending not set up or failing	Send the link manually for now, then fix `SMTP_USER` / `SMTP_PASS`
The super admin left the clinic	The super admin role is stored in the `staff` table	In the SQL Editor: `update public.staff set role = 'super_admin' where email = '<new owner>';` then demote or remove the old one
Supabase project paused	Free projects pause after a week with no activity	Restore it in the dashboard, or move to Pro for production

Moving from test to live payments

1. In Stripe, complete the account activation: business details and bank account.
2. Replace `sk_test_` / `pk_test_` with `sk_live_` / `pk_live_`. The secret key goes in Supabase; the publishable key goes in Netlify, followed by a redeploy.
3. Create a **live-mode** webhook endpoint and update `STRIPE_WEBHOOK_SECRET`.
4. Make one real small purchase, then refund it.

7. Ongoing Services from Kelpsi Software LLC

For clinic management.

After handover, Kelpsi Software LLC will keep supporting the website as set out below. Fees, hours and response times in [brackets] are to be agreed and confirmed in the service agreement.

Included services

1. Hosting and platform management

- Monitor that the website, admin panel and server functions are up.
- Manage deployments on Netlify and Supabase.
- Track Supabase and Netlify usage and advise before a plan upgrade is needed.
- Manage domain and SSL renewal reminders.

2. Maintenance and security

- Regular dependency and security updates, every [3 months].
- Review server function logs for errors, every [week].
- Confirm database backups are running, and test a restore every [6 months].
- Review staff access on request, or every [6 months].

3. Integration care

- **Stripe:** webhook health, the move from test to live, and help with payment questions.
- **Email:** sending account and delivery problems.
- **WhatsApp Cloud API:** template approval and token renewal.
- **Instagram:** token renewal and feed sync checks.
- **Google reviews:** API key management.

4. Technical support

Support covers faults in the website, the admin panel and the integrations.

Priority	Example	Response time
Critical	Website down, bookings or payments not working	[Within 4 business hours]
High	Emails or WhatsApp alerts not sending; admin panel error	[Within 1 business day]
Normal	Display issue, small bug	[Within 3 business days]

- **Support hours:** [Sunday–Thursday / Monday–Friday, 9:00–18:00 GST]
- **Report issues to:** [support email] or [WhatsApp number]

- **Include:** the page address, what happened, the time, and a screenshot if possible.

5. Content updates

- Text, price, doctor and opening-hours changes that live in the code (see file 4).
- Includes up to [X hours per month]. Extra time is billed at [rate].

6. Monthly report

- Uptime, bookings and orders summary, issues fixed, and recommendations.

Optional services (quoted separately)

- Uploading product and treatment images straight from the admin panel.
- Real HydraFacial before/after content and new treatment pages.
- Writing and publishing Insights articles, and SEO improvements.
- Arabic version of the website.
- Linking online bookings with the clinic's appointment system (InstaHMS).
- Patient reminder messages by WhatsApp or email before appointments.
- More detailed staff roles, for example reception-only access to bookings.
- Analytics, Google Ads and Meta Pixel setup.

Terms

Start date	[ ]
Term	[12 months, renewing automatically unless cancelled with 30 days' notice]
Monthly fee	[AED]
Third-party costs (Supabase, Netlify, Stripe fees, Meta, Google, domain)	Paid directly by the clinic
Out of scope	Problems caused by changes made outside Kelpsi, outages of third-party services, and new features (quoted separately)

If the arrangement ends

The clinic owns every account and the code (see file 2). Any other developer can take over using this pack and the main README. Kelpsi Software LLC will then:

- remove its own access
- hand over any credentials it holds
- give reasonable help with the transition, for [30 days]

8. Handover Checklist and Sign-off

For both parties: Kelpsi Software LLC and Pearl Aesthetics & GP Medical Clinic.

Tick each item together at the handover meeting. Write "N/A" next to anything that does not apply.

A. Code and documentation

- ☐ All final code committed and pushed to GitHub (`abrahamoadegbola/PEARL-AESTHETICS-GP`), on the `main` branch
- ☐ Clinic given owner or admin access to the GitHub repository
- ☐ This handover pack and the main README delivered

B. Accounts transferred to the clinic

- ☐ Netlify: site moved to the clinic's account, or clinic added as owner
- ☐ Supabase: project owned by the clinic's organisation
- ☐ Stripe: account in the clinic's name, activated for live payments
- ☐ Gmail sending account and App Password
- ☐ Meta for Developers app (WhatsApp and Instagram) owned by the clinic's Business account
- ☐ Google Cloud project and Places API key
- ☐ Domain registrar login
- ☐ All passwords and keys handed over securely, not by plain email or WhatsApp

C. Configuration complete

- ☐ `supabase/schema.sql` run on the production database (latest version)
- ☐ All 8 Edge Functions deployed
- ☐ Public sign-ups turned off in Supabase Authentication
- ☐ Site URL and `/admin/accept-invite` redirect URL set in Supabase Authentication
- ☐ Clinic owner's account created in Supabase, and owner signed in first (now super admin)
- ☐ Supabase secrets set (`supabase secrets list` checked)
- ☐ Netlify environment variables set, and the site rebuilt
- ☐ `CLIENT_URL` set to the live domain
- ☐ Stripe webhook created, with the signing secret set
- ☐ `CLINIC_NOTIFY_EMAIL` set to the clinic's real, confirmed inbox

- ☐ WhatsApp templates approved and their names set
- ☐ Instagram token set; feed and videos showing on the live site
- ☐ Google Places API key set; live reviews showing
- ☐ Optional: hourly Instagram sync scheduled

D. Tested on the live site

- ☐ Every page loads on mobile and desktop
- ☐ Booking made: patient email, clinic email and WhatsApp alert received
- ☐ Contact form sent and received
- ☐ Shop order paid by card: order marked Paid, stock reduced, emails and alert received
- ☐ Refund in Stripe changes the order to Refunded
- ☐ WhatsApp order option works
- ☐ Instagram video plays in the website's own player
- ☐ Location links open the clinic's Google Maps listing
- ☐ Super admin invites a staff member; the invitation email arrives and the link sets a password
- ☐ Invited staff can log in to `/admin`, update a booking status and edit a product, and cannot see the Staff page
- ☐ Removing a staff member ends their access

E. Content the clinic still needs to provide

- ☐ Real, consented before/after photos for the HydraFacial page
- ☐ Real Insights articles and Special Offers
- ☐ Confirmed clinic email address

F. Training

- ☐ Admin panel walkthrough given to staff (file 3)
- ☐ Super admin shown how to invite, reset and remove staff
- ☐ Instagram caption tags explained to the marketing team (file 4)
- ☐ Staff invited: _____

Sign-off

By signing, both parties confirm that the items above are complete, or are listed below as outstanding. Ongoing support then continues as described in file 7.

Outstanding items, with owner and due date:

1. _____
2. _____
3. _____
